

Advocate Soap Recommendations

Soaps and Maintenance

The info below serves as a quick overview for [Advocate Lavatory](#) soap recommendations, see the [Soap Recommendation](#) document for more technical information

Recommendations

- **Use Thinner Soaps** *viscosity* <2500 cPs is required to ensure adequate flow. Soaps >2500 cPs may either decrease flow or clog the dispenser.
- **Dilute Soap Concentrate** Many soaps are sold in concentrate form and should be diluted with water before filling the dispenser.
- **Prime The Dispenser** The soap line will need to be primed during first installation and any time the tank is completely emptied.
- **Refill When Indicator Flashes Red** This tells you the soap is almost empty and should be refilled. The dispenser should not need to be primed in this case.

Compatible Soaps

Brand Compatible Model Viscosity (cPs) approximate*

Brand	Compatible Model	Viscosity (cPs) approximate
Aterra	12079	1403
Boardwalk White Lotion Soap	BWK420	1600

* Viscosity verified through manufacturer's MSDS. Formulas are subject to change.

Other soaps will be added here as they are tested.

Priming The Soap Dispenser (Models manufactured prior to 2/1/14)

The first time you use the soap dispenser, it will need to be primed. It may need to be primed again if you're refilling an empty tank of soap.

1. Pour 1 cup of water into the tank
2. Put hand under soap spout to activate dispenser. Repeat until water comes out.
 - Soap activates up-to 3 times within 15 seconds
 - After 3 activations, dispenser will not activate during 15 second, anti-vandal, timer. Dispensing will resume thereafter
 - It will take 8-12 activations to prime the line
3. Once system is primed, pour in compatible soap until full (indicated by "chirp" sound)

* If you are unsure of manufacture date try both methods to prime the unit

Priming The Soap Dispenser (Models manufactured after 2/1/14)

The first time you use the soap dispenser, it will need to be primed. It may need to be primed again if you're refilling an empty tank of soap.

1. Pour 1 cup of water into the tank
2. Put hand under soap spout for 15 seconds to activate auto prime mode
 - Hold hand in place for up to 30 seconds
 - It will take 8-12 activations to prime the line
3. Once system is primed, pour in compatible soap until full (indicated by "chirp" sound)

* If you are unsure of manufacture date try both methods to prime the unit

AnswerNET

BradLIVE

Washroom Accessories

Accessories to fit every washroom and budget

Showers

Meet the needs of most shower room applications

Ligature Resistant

Designed to minimize ligature points

Washfountains

The leader in water and space-saving products
